

Project Breeze

Group members:

Steven Strickland

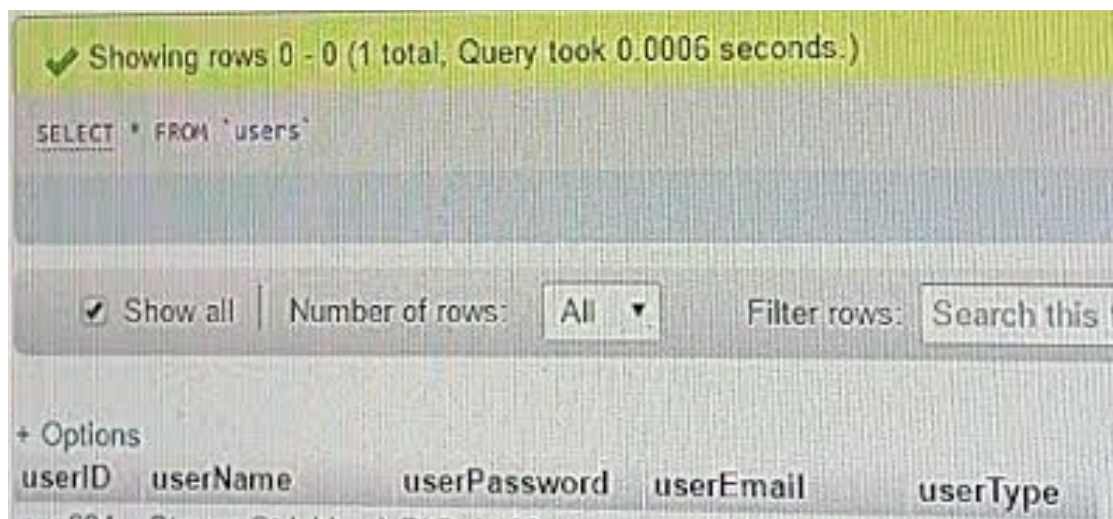

Alexandre Lacy

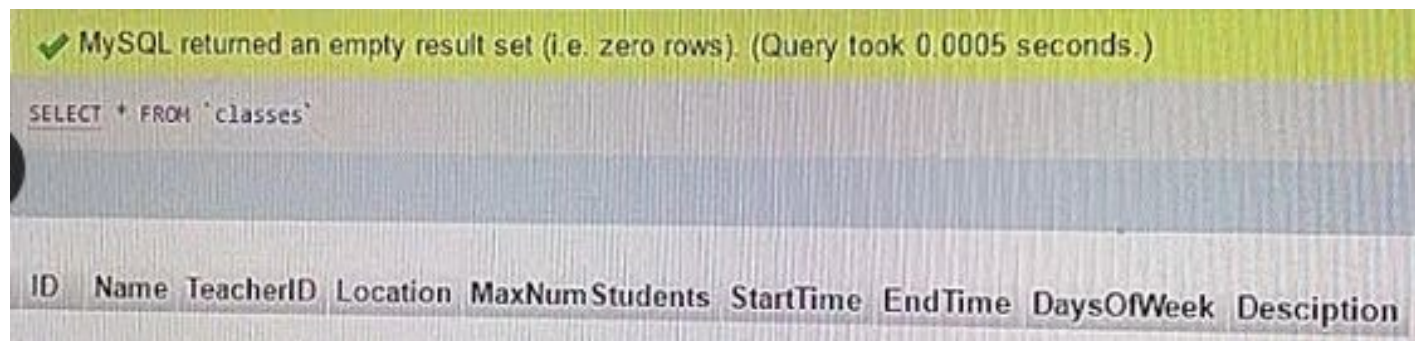

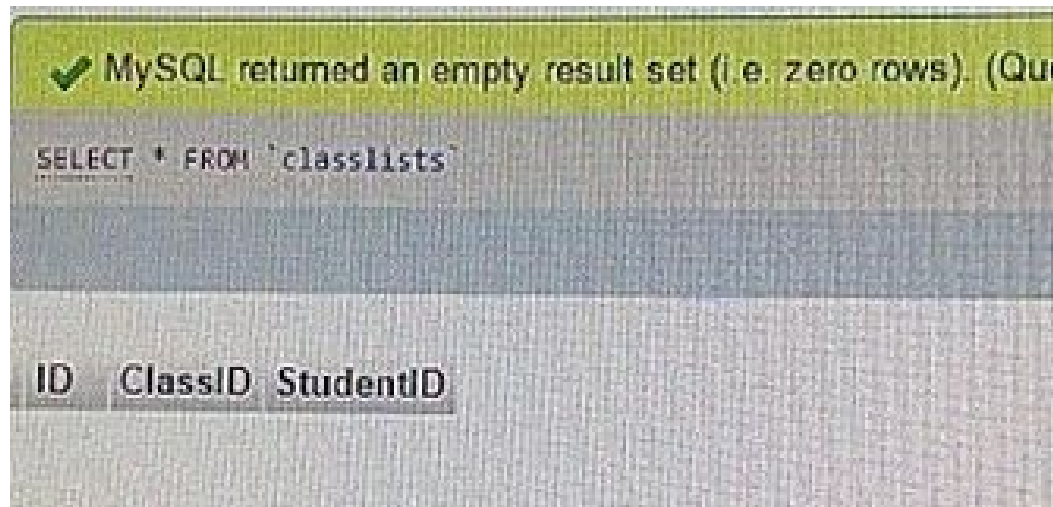

Joshua Shaffer

Description of Technology:

For our project we decided that the technologies we needed were just basic web development as well as using a MySQL database to store the necessary information for our school system. The languages we are using are HTML/CSS and PHP, these will allow us to build our simple and responsive design website. The source code is posted online at Github and the user stories are on Trello (The links are above). The link to the current prototype of the website is <https://www.cefns.nau.edu/~jls865/>. For now the website is missing a couple of the source code files in the github because we have not yet set up the cefns MySQL database to account for the new files as we have forgotten the URL to the phpmyadmin so we have to ask for that.

Tables for the Database:

Group Participation:

We all discussed and weighed our options regarding the technology we wanted to use.

Steven Strickland- Worked on website to implement user story.

Alexandre Lacy- Worked on website to implement user story.

Joshua Shaffer- Worked on website to implement user story and document completion.
