

Project Breeze

Group members:

Steven Strickland

Alexandre Lacy

Joshua Shaffer

Description of Implementation:

For this release we added an ability to upload documents to the database so that teachers can post class material and students can upload their completed homework assignments. The other feature we added was the ability for teachers to create quizzes for the students in their class to take. Using our product would be difficult for someone to set up so we included a document which includes the MySQL commands to create and manage the database tables to help the admin. Check Trello and Github to view the source code and user stories. The code is working on our own local database but has not yet been added to work on the given website as we have not yet accessed the NAU database to create the tables and set up a live version.

Group Participation:

Steven Strickland-Created the class list page, teacher action page, and the admin setup document.

Alexandre Lacy- Fixed bugs in previous release and helped implement user stories.

Joshua Shaffer- Created the file uploading/downloading code along with their MySQL table. Created this document.
